Network Alliance Celebrates 10th Anniversary

Reston, VA – Network Alliance, a Reston-based organization providing IT Solutions to small businesses, is celebrating its 10th Anniversary. Don Britton, President & CEO, founded Network Alliance in 1997 with the vision to make technology simple.

He and his core team set up shop and developed eCAP – Network Alliance’s answer to a better way of providing technology solutions for small businesses. Previously only available to companies with large budgets and staff, Network Alliance made it possible for small businesses to benefit from technology that is simple, reliable and affordable. “Our model allows customers to benefit from Fortune 500 computer infrastructure and services at a fraction of the cost,” Don Britton said. “We help businesses stay focused, reduce expenses and enjoy peace of mind they could not afford otherwise.”

As an active member of the philanthropic community, Network Alliance will celebrate its Anniversary by raising funds to benefit several of its non-profit clients based in the Washington, DC Area. Network Alliance has pledged to match a portion of the proceeds raised through its fundraiser and the total dollar amount will be donated to the non-profit organizations. The non-profits include: Community Foundation, DC Education Compact, Earth Conservation Corp, Great Reston Arts Center, Heads Up, Horton’s Kids and Washington Tennis & Education Foundation.

“We attribute much of our success to the relationships we have built throughout the years and by being an active member of the philanthropic community,” Don Britton said. “It is important that we support these organizations as we celebrate our success.”

For more than 10 years, Network Alliance has been providing small businesses and organizations a simple and affordable way to manage their computer systems by becoming their IT backbone and outsourced IT department, all in one. Network Alliance manages and supports software, files, and email on their secure network, which is accessible from any computer or device connected to the internet. Clients simply log in – Network Alliance handles the rest.
